DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kleks et al. USPN 5,417,718. Kleks teaches a method in which an evoked response is detected and compared to a polarization template, with a matched evoked signal indicating a lack of success, and a prescribed difference indicating a capture success. See column 14 lines 19-27. A signal is generated (see item 180 of algorhythm) as a "no" when the feature comparison indicates no capture. The signal generated, however represented electrically, induces a return to stimulation in the system.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 14-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kleks et al. USPN 5,417,718. While applicant teaches the detection and comaparision of negative signals, Kleks evaluates the amplitude of evoked signals by using a threshold value to detected the evoked signal. Switching the polarity of the sensing

Application/Control Number: 10/047,999 Page 3

Art Unit: 3766

elements and threshold value would not constitute and unobvious difference since the same result would be obtained.

Allowable Subject Matter

Claims 3-6, 8, 16-18, 26-32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed 8-8-2005 have been fully considered but they are not persuasive. Applicant's argue that the Kleks reference does not generate a "positive" signal when an evoked response is compared to the template and the resulting signal provides further treatment. Presumably, this is because the algorithm shows a "no" response when the detected signal resembles the polarization template. However, the electrical signals representing the response is not in fact a no, but an electrical signal whether it be a 0, a 1 or a 2, each is a positive response as opposed to no response. The examiner fails to see how a different "representation" of a electrical signal that accomplishes the same task would constitute patentable subject matter as argued by applicant.

Conclusion

Art Unit: 3766

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark W. Bockelman whose telephone number is (571) 272-4941. The examiner can normally be reached on Monday - Friday 10:00 to 6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pezzuto can be reached on (571) 272 -6996. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
